This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. INTRODUCTION.

THE publication of the Index to the Library Catalogue has been undertaken by the Council, in the belief that it will add very materially to the usefulness of the Library, by collecting together the names of authors who have written on the various subjects indicated, and whose works are in the possession of the Society. Its compilation has been the work of the Sub-Librarian, Mr. Wheatley, who has devoted to it the greater part of his leisure time during three years. When completed, it was presented by him to the Council, who gratefully accepted the gift as a fresh instance of his zeal for the welfare of the Society, and appointed a Committee to superintend its publication, by whom the MS. was thoroughly revised, and each sheet subjected to the most careful scrutiny whilst passing through the press. They trust, therefore, that the errors almost unavoidable in the first edition of a work of this kind will be found as few as possible, and they would offer the following explanations, which may aid in making the plan on which it has been constructed intelligible.

1. In the arrangement of the names of authors, Academical Dissertations and Theses are separated by an asterisk

28268

from the other works on the same subject, according to the plan already adopted in the Library Catalogue.

2. Under the subheading of "plates," reference is made not only to "atlases," but also to any works of which the plates form a very important feature.

3. The Index refers to authors of papers in Journals and Transactions only when those papers have been issued separately, and copies have been presented to, or purchased by, the Society. This has given rise to the insertion of some names as writers on subjects who have not published substantive treatises on them, whilst others, having equal claim to notice in a bibliographical point of view, have necessarily been omitted because their names do not appear in the Catalogue.

4. All systematic works are entered under the general headings of Medicine, Surgery, &c., and the names do not recur under any of those subjects which are necessarily included in them as subdivisions; but reference is made under these subdivisions to collected works of authors in which special subjects are enumerated on the titlepage [*e. g.* "Bright (Richard) Reports," &c. (Lib. Cat., p. 97, anno 1856), are referred to under "Anasarca," "Ascites," &c.]

5. In cases of works with indefinite titles, such as 'Essays on Medical and Surgical Subjects,' &c., the books themselves have been consulted, and the special subjects of which they treat included in the Index, with an addition to the author's name of some portion of the title sufficient to indicate the character of the work [*e. g.* under "Bleeding" (Index, p. 29), "Paine (Commentaries)"].

6. Names of authors on general classes of disease [*e. g.*

Diseases of the Urinary Organs] have not been repeated under the subdivisions [*e. g.* Bladder, Urethra, &c.], except when those words occur on the titlepages of the books themselves.

7. Works on general and special subjects are connected by cross-references, which have been made as numerous as possible. Cross-references will also be found from the various epithets employed in the titles of books in the Library to some synonymous term under which all such works have been classed [*e. g.* "Measles, see Rubeola;" "Morbilli, see Rubeola," &c.]

8. Among the names of authors will be found any subject-headings which occur in the Library Catalogue. These have been generally marked by inverted commas [*e. g.* under FORMULÆ (Index, p. 106), 'Pharmacopœia,' 'Prescriptions' (Lib. Cat., anno 1856, pp. 496—501; and p. 519) *q. v.*]
